

I love xm radio. for 10.00 a month you get uninterrupted commerical free radio with news,weather,stock info and comedy and traffic. I would like this to continue without having governement interven and stop the traffic and weather for local areas. I understand that this might hurt current competition but thats life. just like microsoft beats macintosh back in the day. the better service wins. right now their are thousands of local radio stations vs. 1 company. all the radio statios better start offering thier own digital service commerical free with news and weather or get put out of business. if this requires the fcc to change digital communications on public radios then so be it. its the 21century and needs to be addressed.public radio is great but digital public radio is better. just like the internet and mp3 internet radio.

I'm paying for a private service from a public company on the newyork stock exchange that the government approved to be their. now people want to change that and not allow public weather and traffic on priivate company that the government approved. think what could do to xm and the future of it.

thank you for your time
